

## Preface

Welcome to NISK 2016, the ninth addition of the Norwegian Information Security conference. It will take place in Bergen on the 28-30 November, 2016 and hosted by the Bergen University College. As before, the conference is collocated with NIK and NOKOBIT; and additionally this year with UDIT. NISK 2016 is sponsored by FRISC - Forum for Research and Innovation in Security and Communications, a value network in VERDIKT program, partly funded by the Norwegian Research Council. The purpose of the conference is to create a channel for presenting and publishing new research contributions in the field of Information and Communication security. Traditionally, NISK welcomes contributions both from established researchers and practitioners as well as PhD and Master Students specializing in the broad field of information security. The conference aim is to present a diversity of cutting-edge problems and proposals. Although NISK is intended as a national conference, we also acknowledge that the working language of science and technology today primarily is English. Therefore, submissions in both Norwegian and English are suitable. However, this year only papers in English were submitted.

This year we had 13 high quality submissions. The submissions were reviewed by 3 members of the Program Committee each and based on their feedback 9 papers were selected for presentation and publication in the Proceedings. All 9 papers will get 30 minute timeslot for presentations and discussions.

The keynote speaker on this year NISK conference is Leif Nilsen from Thales Norway AS. The title of his talk is "Computations and Cryptology – An Eternal Golden Braid".

I would like to thank all the members of the Program Committee for their efforts and valuable comments.

NISK 2016 PC Chair  
Alexander Kholosha  
Bergen, November 2016
